

CallCatcher.Personal GSM[®]

The professional desktop solution for personal GSM voicerecording

The CallCatcher.Personal GSM

This portable voicerecorder efficiently stores GSM mobile conversations and SMS messages on a standard desktop or notebook computer. These voicerecordings are enriched with CLI / DDI number information and other Call Detail Records.

Vocirecordings and SMS messages can be searched for, played back and provided with additional comments using the included client software applications. Locally, over the corporate LAN or internet.

This unique product utilizes integrated back-to-back Quad-Band GSM mobile gateway technology.

Protect your Position.....

Record Mobile Calls

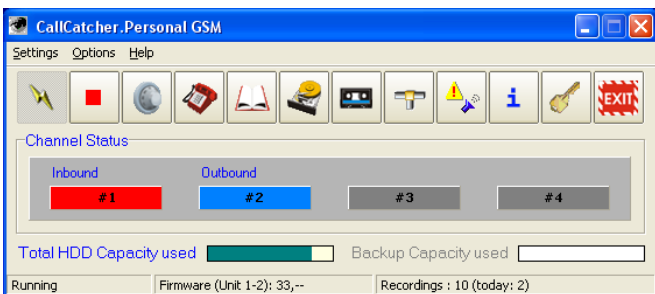

This is an important issue for many travelling professionals, doctors, salesmen, private and public companies, safety/health organizations, banks, stock-brokers and government agencies.

A number of reasons why to choose GSM voicerecording:

- Security and event reconstruction
- Record verbal agreements; prevent disputes
- Conversations and SMS recording at all times; users not bound to fixed PBX lines

Portable and effective

This compact and portable GSM voicerecorder has numerous unique features, including superior sound quality (also when using speech compression). Because of its flexible USB interface it can be connected to any desktop or notebook computer running Windows XP or Vista. PCI card versions of all product models are also available when portability is either not required or desirable.

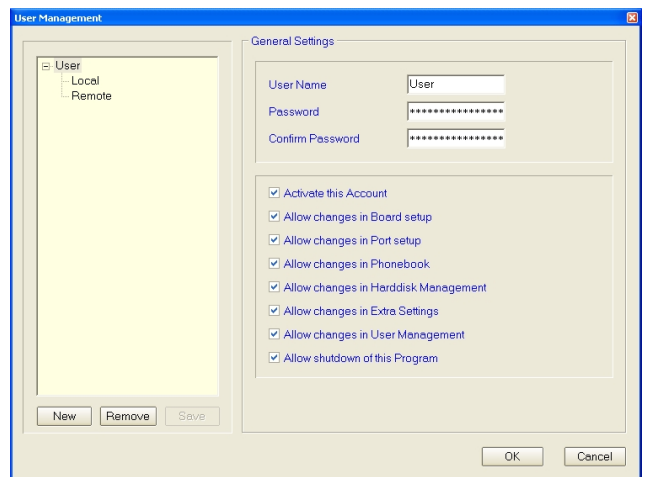

Ease of use

New users can learn quickly how to use the intuitive windows interface and will appreciate the easy to use advanced configuration controls and searching capabilities.

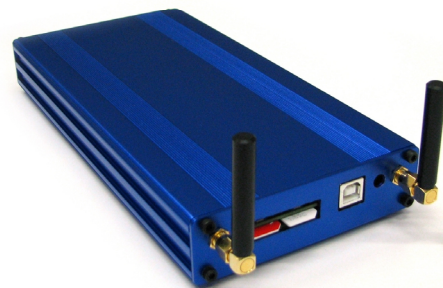

Security and access control

You can decide which persons will have access from which predefined networked PC to certain facilities of the CallCatcher.Personal GSM. Advanced user management defines who is allowed to playback or manage certain recordings.

Managing the recorder using SMS

As mobile users might not have local or remote access to the voicerecorder, various settings and their personal phonebook can be managed using SMS messaging from their own mobile phone.

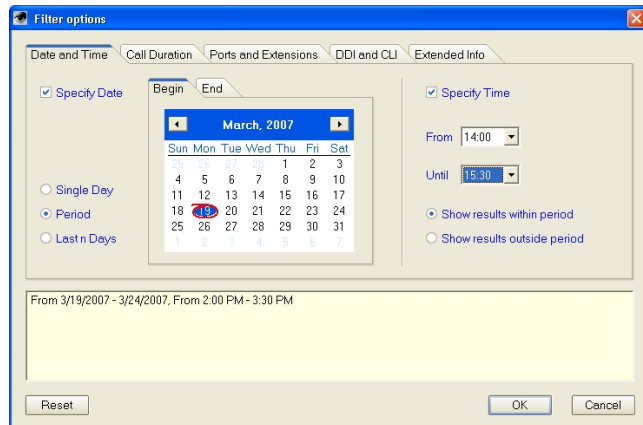

Features

- Easy to install and to configure
- Programmable and configurable using SMS
- SMS alert and feedback notifications
- Full duplex Voice and SMS message recording
- Compatible with all mobile operators
- Quad-Band GSM technology
- Single and dual channel device models
- Two devices per server (four channels total)

- 60 hour / Gbyte (200 Gb HDD = 12.000 hour)
- Advanced user-management and security
- Powerful search capabilities
- Export to WAV files
- Built-in backup scheduler
- Backup possible to CD/DVD/DAT/Tape/LAN
- Embedded Call and SMS transparency
- Transparency maintained even when Windows Operating System or CallCatcher software application is not running
- PCI card versions
- USB portable versions
- CE, FCC and RoHs compliance

Searching and playback

Searching, playback and managing your voicerecordings can be done locally on the CallCatcher.Personal GSM and over the corporate LAN or internet using CallPlayer and CallLive client software applications. You will find the recordings you're looking for....Quickly and Easily.

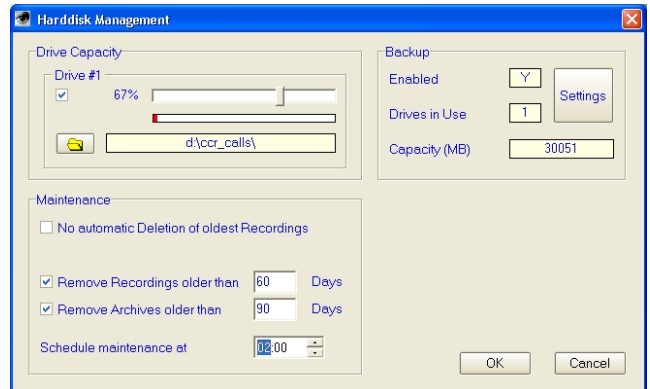

CallCatcher.Personal GSM Server

The CallCatcher.Personal GSM server application is the core of the voicerecorder. It monitors the speech, signalling (like CLI and DDI) and SMS messaging on the internal back-to-back repeater GSM gateways and stores these on the harddrive. Files are stored in a secure encrypted format in which all Call Detail Records and SMS are included as well. A selection can be made from 64 or 36kbit/s speech compression of excellent quality.

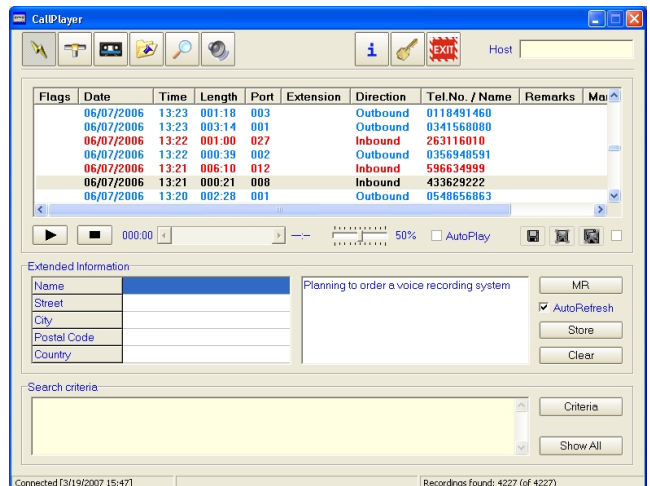

Harddisk and backup management

Managing harddrive usage and configuring the backup facility is easy. You can specify if and when recordings can be deleted and when backups are to be scheduled.

CallCatcher.Personal GSM Clients

CallCatcher.Personal GSM client software applications like CallPlayer and CallLive allow the user from anywhere on the LAN or internet to listen in real-time to conversations, search for recordings and add comments to recordings.

CallPlayer Drag & Drop

Using the CallPlayer client software it is easy to drag & drop voicerecordings in WAV or MP3 formats into Outlook to support written notes or to send them as an e-mail attachment.
