

CallCatcher.Personal®

The professional desktop solution for your personal voicerecording

The CallCatcher.Personal Edition

This portable voicerecorder efficiently stores telephone conversations on a standard desktop or notebook computer. These voicerecordings are enriched with CLI / DDI number information and other Call Detail Records.

Voicerecordings can be searched for, played back and provided with additional comments. Optional client software is available for remote playback and live monitoring over the corporate LAN or internet.

This outstanding product can be connected easily and fully transparently to internal analog or digital PBX extensions or to external analog or ISDN CO lines.

Protect your Position.....

Record Telephone Calls

This is an important issue for most private and public companies, service providers, call centres, public safety/health organizations, banks/stock-brokers and government agencies. A number of reasons why to choose long-term voicerecording:

- Security and event reconstruction
- Record verbal agreements; prevent disputes
- Quality and efficiency improvements
- Follow-up information; support written notes

CallCatcher.Personal portable and effective

This compact and portable voicerecorder has numerous unique features, including superior sound quality (also when using speech compression). Because of its flexible USB interface it can be connected to any desktop or notebook computer running Windows XP or Vista. PCI card versions of all product models are also available when portability is either not required or desirable.

Ease of use

New users can learn quickly how to use the intuitive windows interface and will appreciate the easy to use advanced configuration controls and searching capabilities.

The CallCatcher.Personal can be used to record all your telephone calls automatically or it can be used to record manually using the small recording panel that can be placed anywhere on your screen.

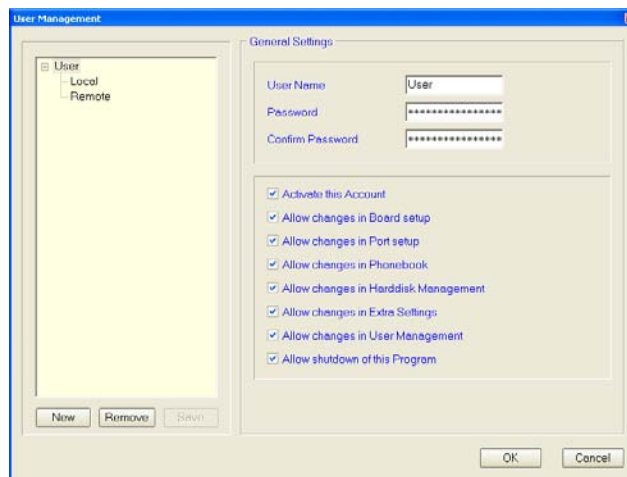

During a call, additional notes can be added to your automatic or manual initiated recording. With the build-in extensive search capabilities you will find all the voicerecordings you're looking for....Quickly and Easily

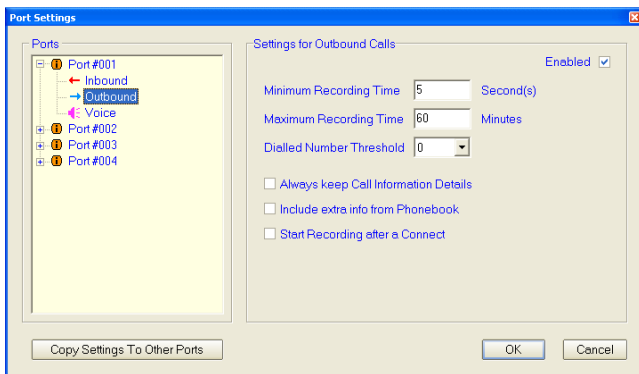

Security and access control

You can decide which persons will have access to the CallCatcher.Personal and the recordings.

- Very attractive pricing !

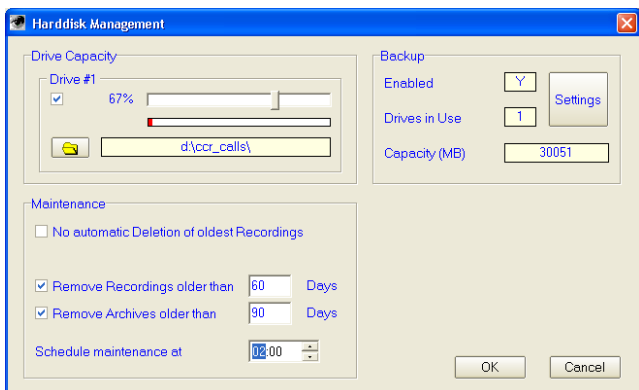

CallCatcher.Personal Server

The CallCatcher.Personal server application is the core of the voicerecorder. It monitors the speech and signalling (like CLI and DDI) on the telephone lines and stores these on the harddrive. Files are stored in a secure encrypted format in which all Call Detail Records are included as well. A selection can be made from 64 or 36kbit/s speech compression of excellent quality.

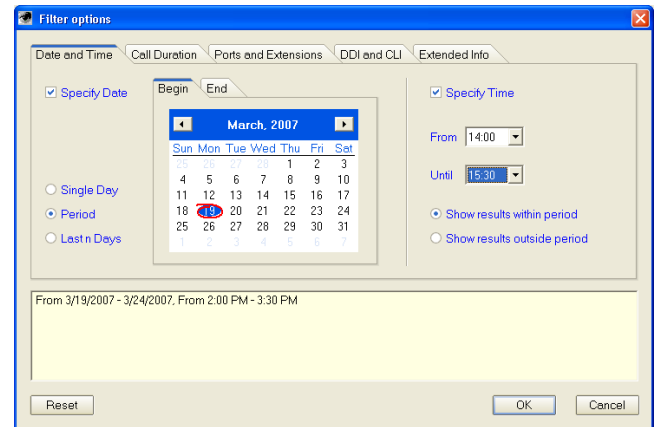

Harddisk and backup management

Managing harddrive usage and configuring the backup facility is easy. You can specify if and when recordings can be deleted and when backups are to be scheduled.

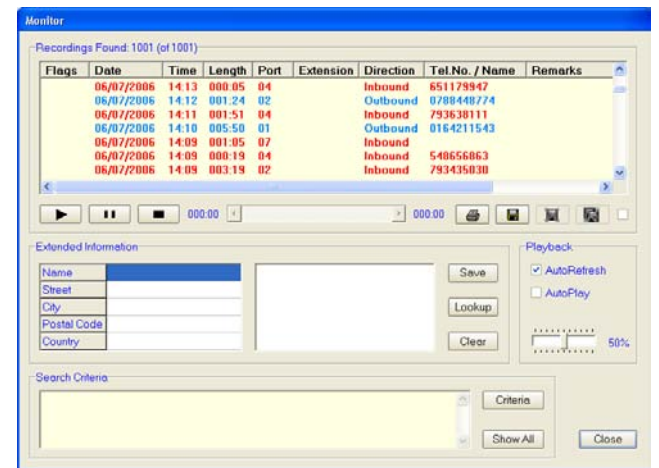

Searching and playback

Recordings can be found easily using the integrated searching facilities.

Playback, adding comments to recordings and export a recording to WAV can be done locally.

Optional client applications

CallCatcher.Personal client software applications like CallPlayer and CallLive can be purchased optionally and allow the user from anywhere on the LAN to listen in real-time to conversations, search for recordings and add comments to recordings. This is ideally suited for quality and supervisor monitoring applications.

Screen capturing

Optional CallCapture client software enables high resolution MPEG4 based screen recordings (including mouse and cursor movements) synchronised with voicerecordings.
